

intemail C5 series

The C5 series from inTemail are a range of modular, intelligent mailing systems.

Range Features

- a uniform C5 series base inserter
- a uniform track extension
- upgradeable with any modular inTemail feeder
- re-configurable feeders or combination of feeders
- simple roll-up, plug-in feeders / loaders
- real time operating software control
- superb reliability
- great functionality
- finest build quality
- low maintenance
- optional dual machine track extension
- optional InTemail cross fold unit

Modular system configurations

The systems outlined below incorporate the same C5 series base inserter, with a track extension, for the integration with any modular inTemail feeder or cross-fold unit.

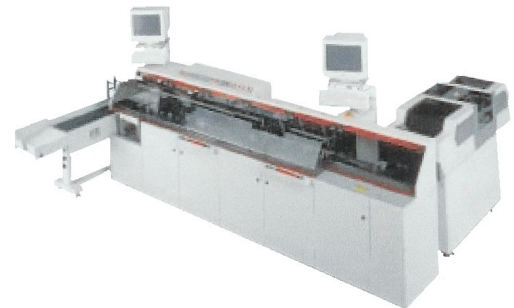

The inserter may, however, be equipped with a dual machine track extension for the integration of additional feeders, providing for numerous separate input document streams processing.

The feeders, or combination of feeders, are simply rolled-up, plugged in and the entire system, under control of the inTemail real time systems operating software, is ready to go. Machines are available in configurations of between 2-16 stations.

C5 VAF Variable Accumulator Folder Feeder

A single channel, single stream document processing system

- VAF sheet feeder/accumulator/folder module

C5 DAF Dual Accumulator Folder Feeder

A single channel, dual stream document processing system

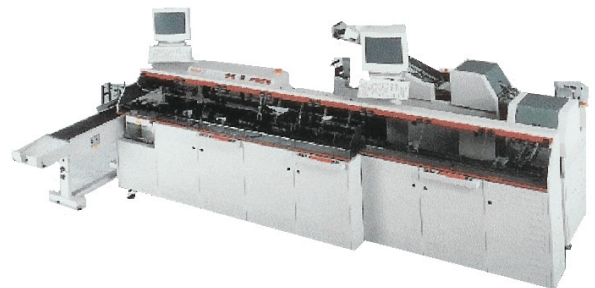

- DAF sheet feeder/accumulator/merger/folder module

C5 DAF.XF Dual Accumulator Folder Feeder with cross fold unit

A single channel, dual stream document processing system with cross-fold unit

- DAF.XF sheet feeder and cross-fold unit

Further modules and feeder configurations are available to accommodate a variety of applications.
